Senior Frontend Engineer (React, Next.js)

EXPERIENCE

Senior Frontend Developer

Spritle Software — Feb 2022 – Present

- Actively building **frontendx.dev** through AI agentic coding — a browser-native coding platform on Next.js + Cloudflare where users solve DSA and frontend problems client-side via WASM, Web Workers, esbuild, and a customized NodePod for backend execution. Also developing an AI-powered **PRD generator** that produces structured feature specs, agentic harness files (ralph.json → plan.json), and HTML prototypes for fully autonomous AFK coding workflows.
- Architected and deployed **AMC Desk**, a SaaS contract management platform on React 19 + NestJS + Postgres — built entirely through AI agentic coding. Led the migration from Supabase (RLS policies, Edge Functions) to a clean NestJS backend with TypeORM, RBAC, and real-time notifications. Developed custom agent skills for zero-downtime deployment automation on AWS EC2 + S3 with rollback safety and post-deploy verification checks.
- Owned frontend architecture for enterprise React/Next.js platforms (including Nestlé Health Science) and built AI-driven document intelligence & RAG-based chat widgets used across multiple internal applications.
- Resolved critical performance bottlenecks in data-heavy dashboards — migrated marketing/content platforms to Astro with Island Architecture (45% smaller JS, 38% better Core Web Vitals, 50% faster TTI) and engineered build-time prerendering in a legacy CRA SPA for TLD-driven multilingual deployments.
- Established team-wide frontend standards (linting, formatting, Git hooks), mentored junior engineers, conducted architectural reviews, and drove best practices across Agile/Scrum teams.

Software Developer

Spritle Software — Dec 2020 – 2022

- Developed and shipped production React and Vue applications for education and travel platforms.
- Collaborated closely with backend, QA, and product teams to deliver features on schedule.
- Improved UI performance and stability by refactoring legacy components and optimizing render cycles.
- Gained hands-on experience with frontend tooling, API integration, and production deployments.

TECHNICAL SKILLS

CORE

- **React**, Next.js, **TypeScript**, Accessibility, Core Web Vitals, TanStack Query and Router, Redux Toolkit, AI SDK
- Bundle optimization, caching strategies, virtualization, code-splitting
- Monorepos (turborepo and pnpm workspace) and Micro-frontends

Tooling & Platforms: Turborepo, pnpm workspaces, Vite, Webpack, Node.js, Cloudflare Workers, AWS (EC2, S3), Docker

AI Harness: Opencode, Claude code and codex

EDUCATION

College of Engineering, Guindy - M.Sc (integrated) in Computer Science
